Jeep JK Template Alignment Adjustment

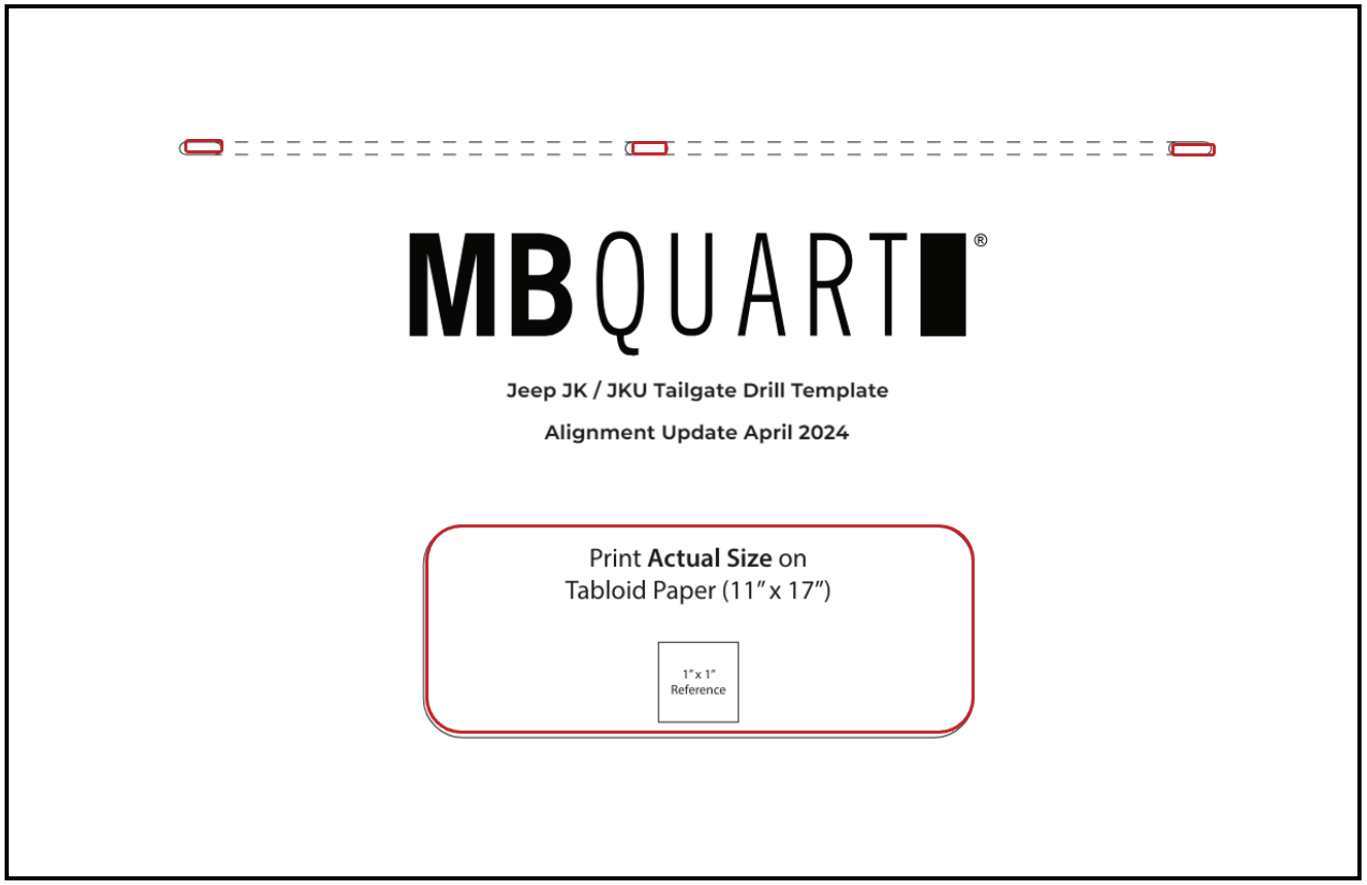

The problem: This may cause your drill holes to land on the edge of an internal brace making the hole hard to drill and your threaded insert hard to place.

The Fix: Use the updated alignment template to raise the 3 alignment markers.

How to use:

Step 1: Print the template on 11 x 17 tabloid, if your printer is not able to print this format, many print shops can print this for you, or reach out to our tech support team **support@maxxsonics.com**

Step 2: Cut out the 4 alignment areas shown below in red.

Step 3: Align the large lower rectangle of the printed template over top of the supplied template.

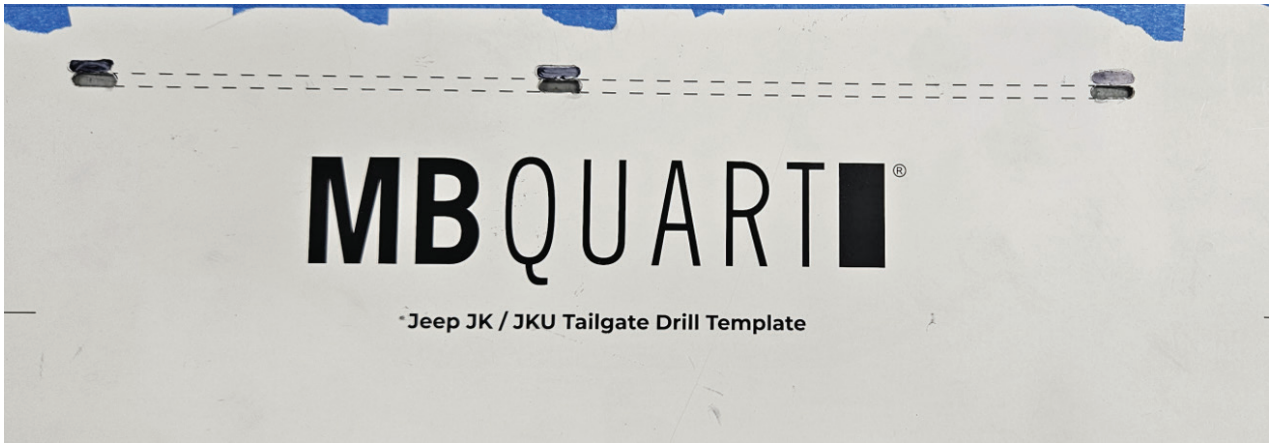

Step 4: Use a marker to mark the 3 upper alignment holes.

Step 5: Remove the printed template from the original. The new marker locations should be directly above the original.

Step 6: Cut out the markered alignment holes and use the template as shown in the manual to align to the vehicle.
